SUMMARY

I am a Full-Stack Software Engineer with 4+ years of experience building and deploying production-grade web applications using the MERN Stack, Next.js, and Laravel. Currently, I work remotely with a U.S.-based SaaS company, where I develop scalable platforms, workflow systems, AI-powered applications, and cloud-based solutions used by real customers.

My experience includes monolithic and microservices architectures, GraphQL, Redis, RabbitMQ, Docker, AWS, authentication systems, API integrations, and AI-powered features using OpenAI APIs. I have contributed to the design, development, deployment, and scaling of multiple SaaS products from concept to production

SKILLS SUMMARY

- **Languages:** JavaScript, Typescript, PHP, Python
- **Frontend:** React.js, Next.js, Vue.js, Tailwind CSS, Shade Cn, Ant Design
- **Backend:** Nest.js, Express.js, GraphQL, Laravel
- **Databases:** MongoDB, PostgreSQL, MySQL, Prisma ORM, TypeOrm
- **State Management:** Redux Toolkit, Zustand
- **DevOps & Deployment:** AWS, Docker, CICD, Github Actions, Vercel, Railway, Netlify
- **Caching & Optimization:** Redis, RabbitMQ
- **Gen AI:** AI integration in Web apps, Langchain, Chatbots
- **Tools & Other:** Testing (Vitest, Jest), Github, Figma
- **Soft Skills:** Teaching, Excellent communication

WORK EXPERIENCE

Junior MERN Stack Developer - Onsite | SH | [LINK](#)

June 22 – July 23

- Joined a UK institute & software house as a Junior Developer to begin my career.
- Contributed to real-world monolithic and microservices-based systems as a junior developer.
- Built and deployed full-stack MERN applications, including an SaaS platform and Food Ordering Platform and built many microservices apps.
- Wrote unit and integration test cases for critical features
- Integrated GraphQL, OpenAI APIs, Redis, and Kafka into scalable systems
- Dockerized microservices and ensured smooth production deployment
- Integrated services into React frontends with efficient state management and real-time features
- Contribute to building HMS, LMS with Laravel
- **Delivered and contributed to monolithic applications** using the **MERN stack**, later transitioning them into scalable microservices for industry-grade architecture.
- Built a **microservices-based system** with 5 core services (**Auth, Catalog, Order, Notification, and supporting services**) using the **MERN stack**.
- Built a **secure, production-grade Auth service** from scratch with **JWT authentication, role-based access control, and token refresh**.
- Implemented **Redis caching** for faster queries, **RabbitMQ message queues** for reliable async communication, and **WebSockets** for real-time updates.
- Developed **Catalog & Order services** with scalable APIs, ensuring high availability and efficient request handling.
- Integrated services into **React + Next.js frontend**, delivering a seamless user experience across distributed components.

- **Led full development of “Recommendas,”** a multi-tenant SaaS platform for managing professional recommendations, compliance checks, and agency workflows.
 - Designed and implemented a **unified microservices + monolithic hybrid architecture**, ensuring scalability and performance for enterprise healthcare clients.
 - Built a **Unified Payment System** supporting 5 SaaS products under a shared billing infrastructure using **Stripe subscriptions and usage-based billing**.
 - Developed an **AI-assisted recommendation engine** with OpenAI API for grammar refinement, auto-correction, and personalized content generation.
 - Implemented a **secure PDF generation and e-signature system**, storing signed documents in private **AWS S3** buckets with expiring signed URLs.
 - Created **real-time messaging** between recruiters, candidates, and recommenders including **secure token-based communication** without login.
 - Built a **Notification System** with **AWS SES** for automated reminders, deliverability tracking, and event logging.
 - Managed **deployments on AWS Lambda and EC2**, integrating **RDS, S3, and SES** for scalable infrastructure.
 - Delivered **multi-stage milestones** covering dashboards, trust codes, GDPR compliance, healthcare question forms, and agency branding.
 - Handled **end-to-end product lifecycle**: architecture, development, testing, deployment, and performance optimization.
-

PERSONAL PROJECTS

Food Panda App | MERN | [GITHUB](#)

Personal Project

- A full-stack food delivery platform with Double authentication for Customers and Restaurant holders.
 - Built an Admin Dashboard for restaurant & menu management with seamless order placement.
 - **Implement Advance Search** (by country, city, restaurant) to enhance user experience.
 - Enabled **smooth order placement** with real-time updates, enhancing customer satisfaction and retention.
 - Integrated **Cloudinary** for optimized media management and storage, ensuring fast image delivery
 - Developed an interactive Admin Dashboard to efficiently manage restaurants, menus, and orders with real-time insights.
 - Leveraged **MERN Stack, GraphQL, Redis, Zustand, TypeScript, and Zod** for scalable, type-safe, and high-performance architecture.
-

AI SAAS APP | NEXT.JS | [LINK](#) | [GITHUB](#)

Personal Project

- Built an AI SaaS web app using Next.js, TypeScript, Prisma, Mongo Db and Open AI APIs. Offering features like chatbots, Code Generation and Reviewer and image tools.
 - Built with **Next.js (TypeScript)** for a high-performance, scalable frontend and seamless user experience.
 - Implemented **Prisma ORM with MongoDB** for efficient database modeling, queries, and secure data management.
 - Integrated multiple **AI APIs (OpenAI, Claude, Gemini, Pollination)** to provide diverse and powerful AI-driven services.
 - Designed and optimized **AI Assistant & Code Analyzer** to automate tasks and improve developer productivity.
 - **Image Generation & Background Removal tools, AI Coach, AI Fun Bot** , enhancing creative workflows and design efficiency.
 - Applied clean architecture & best practices for maintainable, production-ready SaaS development.
-

CERTIFICATES

- Successfully completed **6-month Government e-Hunar Certification in Web Development**, gaining hands-on experience with both **MERN Stack** and **Laravel** frameworks.
- Completed multiple real-world projects under professional guidance, simulating industry workflows.
